

flexographic process because the anilox roller can supply greater amounts of ink to the [flexo] flexographic plate on the plate.

At col. 4, line 47, delete "image".

At col. 4, line 49, insert after "the" the following: receptive surface of the copy web or succession of copy sheets on the

The specification at col. 4, lines 46-51 now reads:

Whenever a station is used for flexographic printing a flexographic plate [image] is placed on the blanket cylinder for receiving the liquid vehicle and transferring the liquid vehicle to the receptive surface of the copy web or succession of copy sheets on the impression cylinder for printing. Anilox roller is associated with the flexographic plate for supplying the liquid vehicle which may be an aqueous bared vehicle

In the Claims

Please amend original patent '363 claims 12, 19-20 and 22 as follows:

12. (Amended) Apparatus for creating a combined lithographic/flexographic printing process comprising:

a substrate;

a plurality of successive printing stations for printing color images on the substrate in a continuous in-line process;

at least two successive ones of said printing stations being flexography stations and comprising:

(1) a supply of liquid coating;

(2) a plate cylinder associated with a blanket cylinder, said plate cylinder having a flexographic plate thereon;

(3) an anilox roller associated with said liquid supply coating and said plate cylinder for delivering said liquid coating to said flexographic plate to form an image for transfer to said blanket cylinder;
